POWER PELLETS™

High Performance Drying Agent

View a Product Demonstration:

POWER PELLETS *is a proprietary blend of organic, re-purposed and "select" agricultural fibers that have been specifically proportioned and blended to quickly solidify and stabilize water based waste stream without the need for large volumes of mineral based materials.*

This high performance drying agent is designed to stabilize up to five times its weight in water based liquids. A specific blend of super absorbent polymers, combined with our patent-pending manufacturing process, contributes to the many benefits this product offers. ***Power Pellets is 2 to 3 times more absorbent than basic wood or corn cob products.***

REMEDIATION

Beyond the oil and gas drilling operations, Power Pellets has been selected for a number of projects as a cost effective solution to managing ***CCR*** *relocation and silt / sediment from* ***dredging & lagoon cleaning*** *projects. Power Pellets has also become very popular with* ***liquid waste processing facilities.*** *The increased performance of Power Pellets saves time, reduces disposal volumes, labor costs and allows for increased production capacities.*

Please contact ***Martlin Distributing*** *today for more information.*

Martlin Distributing is a manufacturer of high performance absorbents and solidification materials.
